RobSurgical

QUALITY POLICY

Rob Surgical Systems S.L. focuses on innovative and efficient solutions for high-precision minimally invasive surgery.

Our company is dedicated to design and developing, production, distribution, installation, and servicing of best-in-class high precision robotically assisted surgical systems, surgical endoscopic instruments and accessories for minimally invasive surgery (MIS). And also, import and distribution of sterile drapes for use with robotically assisted surgical systems.

The values we promote are:

- Commitment to provide high quality products by means efficient and scalable production capabilities and reliable service provision to customers.
- Commitment with regulatory requirements compliance as well as maintaining the effectiveness of the quality management system.
- Commitment with innovation solutions and science of excellence, oriented to address the current challenges of MIS by incorporating new solutions that also improve the sustainability of healthcare systems and to universalize high-precision surgery.
- Commitment with high technology from the perspective of sustaining innovation, applying continuous improvement strategies and considering the users as non-replaceable, but strengthening their tools.
- Commitment with high flexibility design concepts to facilitate the use of new valued medical devices without compromising or creating dependency situations regarding the users.
- Commitment to analyse, evaluate, control and measure based on risk assessment approach.
- Commitment to find safe, effective and efficient solutions with the help of our team, the main value of the Company.
- Commitment to achieving customer satisfaction through the establishment of continuous improvement processes within the company.

As our team is our main value, our commitment is focused in offering the best environment, tools and training for their personal engagement and professional development.

Managing Board is convinced of its principles, and it is committed to providing human, technical and material resources to achieve these objectives.
